Skills

Web Technologies

HTML5, CSS3, JavaScript, TypeScript, Sass, Tailwind CSS, Bootstrap 4 | 5

JS Frameworks

Vue JS, Angular 2 | 4 | 13, Next JS, Nuxt JS, Svelte, Svelte Kit

Programming Language

Python, PHP, Node JS

Content Management System

Wordpress, AEM UI, AEM Franklin, HTL, OSGIM Cloud, JCR/CRX, Artifactory

Tools & Others

Docker, XML, JSON, JWT, DialogFlow, GraphQL, Social Media Integrations, Zoom Integration

IDEs

VSCode, IntelliJ, PyCharm

Task Management Tools

GitHub, Bitbucket, Zoho, Trello, JIRA, GitLab

JS Libraries

React JS, jQuery, jQuery EasyUI, Lodash, Moment, Tensorflow

State Management Libraries

Pinia, Redux with Thunk, TanStack

Programming Language Frameworks

Flask, Django, CodeIgniter, Symfony, Express JS, Laravel | Lumen | Livewire

Databases

MySQL, MongoDB, MariaDB, SQLite, Redis, PostgreSQL

Familiarity of OS

Linux, Ubuntu, Windows, MacOS

Platform for Deployments

Heroku, AWS EC2 | S3, GitHub Pages, Netlify, Oracle OCI

Payment Gateway

Stripe, Paypal

Certifications

React JS

Experience

GSPANN Technologies

Technical Lead

Gurgaon

Oct 2022 — Present

Project Name:
Lifesciences Danaher, Leica Microsystems, Phenomenex, Aldevron

Project Overview:
Migration of projects already built on AEM 6.5 to AEM Edge Delivery Services (EDS) in order to reduce the development costs and enhanced page speed performance

Technologies:
Vanilla JavaScript, TypeScript, Cypress, COVEO (Rest API / Headless / Atomic), Authoring (Document based / Universal Editor based), Tailwind CSS, Vite, HTML5, CSS3

Project Overview:

- Building AEM-Franklin's/Helix multi level blocks & templates for the UI differentiated among multi opcos/brands. Responsible for creating PoCs of integrating COVEO search-engine via COVEO-Atomic | COVEO-Headless | COVEO-API
- Integrated COVEO Search-Engine on different projects under same client using,
 - Coveo Atomic component (feature rich with a collection of reusable components)
 - Coveo Headless (a middle-layer library for developing coveo-powered UI components)
 - Coveo API (raw APIs)
- Implemented website internationalization to ensure E-commerce content is accessible in English, Mandarin (China region), and Japanese (Japan region)
-

Author pages using Adobe Experience Manager's Universal Editor, configure custom blocks, using experience fragments, DAM etc. to create a webpage.

- Contribute in creating new custom AEM EDS Forms

Project Name:

Lifesciences Danaher

Project Overview:

This application deals with scientific electronic parts/components, research studies, scientific lab results contributed to the field for healthcare and pharmaceuticals. Goal is to manage the entire application's content to be managed by a common system where development requirement is minimal.

Technologies:

Vanilla JavaScript, Vue JS 3, Pinia, AEM 6.5, Dialogs, Forms, Slightly, Granite, HTML5, Tailwind CSS, CSS3, Rest APIs

Project Overview:

- Created the whole architectural flow of frontend based on Vue JS, VueUse & Pinia while content was added via AEM.
- Responsible for,
 - creating user-management-profile page.
 - creating home-page for client (confidential)
- Dialog level design with multiple options for creating and designing the component on AEM 6.5.
- Developed own custom libraries such as data-table, carousel, toast using Core JS.

TIC Retail Accessories India Pvt Ltd

Software Engineer

Gurgaon

Apr 2021 — Sep 2022

Project Name:

Solvup

Project Overview:

Customer Support eCommerce platform where online solutions like products can logged as a ticket, replace/return, tracking of product, product details and status can be monitored.

Technologies:

Vanilla JavaScript, React JS, Angular 12, PHP, Symfony, Lumen, MongoDB, MySQL, Redis, Java, Docker, MFA

Project Overview:

- Made Customer Portal frontend for users who can check their product status for Repair or Replace case [Built on React JS] along with handling multiple cases such as Authentication, Authorization, 2 Factor Authentication using either email or sms. Participated in creating some of the microservices using symfony.
- Responsible for Field-Component Design module where CX team can create and manage their components directly from the UI. It's UI was built on top of React JS but Core JS was utilized for the Drag & Drop functionality.
- Migrating a antiquated project built on (Symfony & Angular) to (Lumen & React JS)

Project Name:

Mediator

Project Overview:

A dashboard for banking employees to connect on a single platform in order to maintain clean record with clients and make the interaction smoother where managers can assign relationship-manager to a client for social media conversations which can be monitored through portal.

Technologies:

Vanilla JavaScript, Angular 2, Java, MySQL, Redis, Socket.io, Rest APIs, social-media open API's

Responsibilities:

- Created an extension for social media platform for WhatsApp and WeChat with the objective of capturing and monitoring messages between Relationship-Managers & their appointed clients to enhance the client experience.
- User management application with multiple roles like Managers, Clients, Relationship Managers, Admin, Developer with specific authorized features (Built on top of Angular 2).
- Created a chat application as Bespoke with including features like,
 - Integrated WeChat & WhatsApp(via Twilio) & Line API's onto the chat where clients can message w their day-day social chat platforms as well.
 - Integrated Socket.io to transmit & receive runtime messages.
 - Integrated a custom AI bot to resolve some basic queries of clients with the help of Botman, DialogFlo

Project Name:

LearnCurvv

Project Overview:

Platform to connect all students to visit and choose their course, mentors, time slots and mode of learning (individual online sessions, group online sessions, recorded sessions) and their exam preparations Q&A.

Technologies:

Vanilla JavaScript, React JS, Stripe, Zoom, PHP, Laravel, MongoDB, MySQL, Docker

Responsibilities:

- Responsible for building the architecture & user-interface for creating the flow for the interaction between coaches/trainees & their appointed pupils. Payment Integration system like Stripe & video sharing/capturing features like Zoom were used in this platform.

Project Name:

Crawler

Project Overview:

Crawl the given website URL by user and provide export options in plain text or PDF with filter options.

Technologies:

Python, Flask, Vanilla JavaScript, beautifulsoup

Responsibilities:

- Webcrawling extension with the objective of capturing certain text or images or videos and exporting it as PDF/DOC using python with Core JS.

Projects

APAN Store

Jul 2026 - Present

Description:

- Built a full-featured e-commerce storefront using Nuxt 4 (Vue 3) and TypeScript, integrated with Shopify Storefront API for product/catalog management and Stripe for payment processing
- Implemented a self-hosted Typesense search engine with real-time product syncing, autocomplete suggestions, trending searches, and faceted product filtering
- Developed complete user authentication system (login, registration, forgot password) and customer account management (profile, addresses, order history)
- Designed and built a multi-step checkout flow with address entry, shipping method selection, and order confirmation
- Created an admin dashboard with real-time sales analytics, order management, and interactive charting
- Containerized the application using multi-stage Docker builds with Nginx reverse proxy for production deployment
- Set up CI/CD pipelines via GitHub Actions for automated build, test, lint, and Docker image publishing

Technologies:

- Frontend: Nuxt 4, Vue 3, TypeScript, Tailwind CSS
- State Management: Pinia
- Search Engine: Typesense (self-hosted)
- Backend/API: Shopify Storefront API
- Payments: Stripe
- Validation: Zod
- DevOps/Deployment: Docker, Nginx, GitHub Actions, Oracle Cloud Infrastructure
- Code Quality: ESLint, Prettier, Husky, lint-staged

Vanilla Forge

Mar 2024 – Jun 2026

Description:

- 13 self-contained projects across 3 categories (JavaScript, TypeScript, Libraries)
- Custom SPA architecture with hash-based router and lazy-loaded demos
- Interactive in-browser demos for every project
- Educational content covering JavaScript & TypeScript histories and topic trees
- Production-ready build with code-splitting, CSS purging, and critical CSS inlining
- Responsive design (desktop, tablet, mobile)
- Zero runtime dependencies for all JS projects
- Lazy demo initialization via dynamic import() for code-splitting
- 45+ core JavaScript/TypeScript concepts demonstrated

Technologies:

- Languages: JavaScript (ES6+), TypeScript (5.5+)
- Markup/Styling: HTML5, CSS3 (Flexbox, Grid, CSS Variables, animations), Tailwind CSS
- Build: Vite 8.1, PostCSS, LightningCSS
- Other: sql.js (WASM SQLite), Web Audio API, Fetch API, ES Modules

Docu-Craft

May 2026 – Jul 2026

Description:

- Drag-and-drop CSV upload with real-time progress tracking and file validation (5MB limit)
- Schema-driven CSV creation from scratch with configurable column names and data types
- LLM-based synthetic data generation via Ollama (LLaMA 3.2) integration
- Interactive data editor with table and card view modes, inline cell editing, and row pinning
- Server-side search with field-aware autocomplete suggestions and full-dataset sorting
- Batch operations: multi-row edit, multi-row delete with confirmation, and bulk pin/unpin
- SQL query runner — loads CSV into an in-memory SQLite database for ad-hoc analytical queries
- Change tracking — edited rows are visually highlighted against original snapshots, with revert detection
- Export edited data as CSV or PDF
- Pagination with configurable page sizes (10 / 25 / 50 / 100)

Technologies:

- Frontend: React 19, Vite 8, TailwindCSS 3, React Router DOM 7, Axios
- Backend: Python 3.11, Flask 3.0, Pandas 2.2, SQLite (in-memory), FPDF
- AI/ML: Ollama + LLaMA 3.2 (local LLM inference)
- DevOps: Docker (multi-stage build), Docker Compose, Nginx (reverse proxy), Gunicorn (WSGI)
- Environment: Node.js 22, Python venv, npm
